EXECUTIVE SUMMARY

This document is the eighth Local Development Framework (LDF) Annual Monitoring Report (AMR) for South Derbyshire District Council and covers the period 1 April 2011 to 31 March 2012.

Its overall purposes are to review progress in the preparation of LDF documents against the milestones set out in the Local Development Scheme (LDS); and to assess the extent to which development plan policies are being implemented through the use of a range of indicators. The AMR is in practice a management tool to inform the review of LDF policies, or revisions to the timetable for their preparation.

For the avoidance of doubt, this AMR reports on all indicators, including those related to the East Midlands Regional Plan (EMRP) although this was abolished on 12th April 2013.

Progress on LDF Documents - the Local Development Scheme 2009/10

The current LDS included four milestones within the monitoring period (April 1st 2010–March 31st 2011) relating to the Core Strategy, the Joint Site Allocations Development Plan Document (DPD) for the Derby Principal Urban Area (PUA), the Site Allocations DPD for Swadlincote and the villages and the Generic Development Control Policies as follows:

- The **Core Strategy** Adoption was programmed for June 2010;
- The **Joint Site Allocations DPD** submission to the Secretary of State (SoS) was scheduled for May 2010;
- The **Site Allocations DPD** submission to the SoS was scheduled for May 2010; and
- The **Generic Development Control Policies** submission to the SoS was scheduled for May 2010.

The Core Strategy programme has been aligned across the three local authorities comprising the Derby Housing Market Area (HMA). As indicated informally in last year's AMR, none of the above milestones were met due to revised guidance issued by the Government. The HMA authorities were further advised to avoid formal revisions to Core Strategy timetables pending further revised Regulations. It is the intention to prepare a revised Local Development Scheme reflecting a revised timetable prior to Submission of the Draft Local Plan and this will be made available on the Council website.

Over the 2011-12 monitoring year, however, progress continued on the Core Strategy. Major consultation on the Options for Housing Growth was completed in September 2011. The consultation, which involved a round of 'drop-in' events, followed the introduction of the Localism Bill to Parliament, which established the intention to withdraw Regional Plans and delegate the determination of the extent of housing growth to local authorities. It set out a series of options for addressing how much housing growth should be planned for and where it should be located in the HMA. This followed the initial stage of community engagement, "Your Neighborhood – Talk to Us" undertaken between February and March 2011. These consultations did not follow on directly from the earlier 'Issues and Ideas' and 'Issues and Alternative Options' consultations due to the sweeping reforms then being introduced by the Coalition Government. However, the information collected at these earlier stages remains relevant and will be important in producing the Core Strategy and subsequent LDF documents.

The responses to these consultation exercises and emerging evidence provided the basis for the HMA Council's respective Preferred Growth Strategies, which was made available for consultation between October to December 2012. This set out the amount of new housing considered appropriate for South Derbyshire up to 2028 and the proposed strategy for future strategic residential and employment development within the District. A series of drop in events was held across the district to view the proposals and discuss issues arising with planning policy staff. The other HMA authorities carried out this consultation stage for their respective areas at the same time.

The responses to this consultation exercise will inform the preparation of the "Publication Draft" Plan, which will include the proposed vision, strategy, objectives, strategic development sites and detail policies to guide the determination of planning applications. This is expected to be published later in 2013, with a statutory six-week consultation period. All representations received at that stage will then be submitted to the Secretary of State who will appoint an independent Planning Inspector to convene a public examination into the soundness of the Plan. It is expected that the Local Plan will be adopted shortly thereafter.

Meanwhile, we expect to consult on a Local Plan Part 2, also known as the "Sites and Boundaries" document. This will set out the details of smaller development sites and propose any detailed amendments to settlement and Green Belt boundaries etc.

Work on the collation of a robust evidence base has also continued at both a HMA wide and district level, as indicated in Figure 2 below.

Policy Performance

As in previous years, the range of indicators adopted in this AMR will provide the framework for devising and monitoring emerging LDF policies. The Government has revoked the suite of Core Output Indicators. However, as was the case for the 2010-11 AMR, in order to maintain a consistent dataset the Council has continued to report against the same Core Output Indicators in this AMR, where possible.

Much of the information collected over the monitoring period suggests that relevant aspects of the Adopted Local Plan are being implemented to good effect with many policies still being used to inform development control decisions. A full list of the policies saved after September 27th 2007 can be viewed at Appendix 1 of this report. The following paragraphs summarise the key trends in employment and housing development over the monitoring year.

Employment Development Trends

The rate of starts and completions remains very low, reflecting the continuation of poor economic conditions. There is a good supply of employment land currently available within the district, mainly concentrated at Dove Valley Business Park, Hilton Business Park and at Tetron Point/Cadley Hill. There are few known service constraints affecting the major allocated sites and the situation will be kept under review.

Beyond the major sites planning permission for only one farm diversification and rural conversion project has been applied for and granted in the current monitoring year. However, as previously approved schemes are implemented, they will contribute toward the diversification of the rural economy presenting new employment opportunities.

Of particular note in the past year, outline planning permission has been granted for the development of a 12 ha industrial and business site at the former Drakelow Power Station as part of a larger mixed-use redevelopment scheme. This is expected to contribute toward meeting the employment development needs of the district in years to come.

Housing Development Trends

Past Completions and Overall Supply

Housing completions were lower than the previous years monitoring period with 378 dwellings completed (compared to 447 in 2010-11). There have been 2,735 dwelling completions in South Derbyshire since April 2006, averaging 456 dwellings per annum (dpa). The required annual build rate for this period, as set out in the EMRP, is 600 dpa. This means that overall there was a shortfall of 865 dwellings across the District since 2006 in comparison to the EMRP target.

The lack of building in the Derby PUA arose pending the outcome of a conjoined inquiry into five major housing sites (four in the Derby PUA), between May 2007-February 2008. The SoS's decision was issued in January 2009, by which the wider economic issues were beginning to emerge. This has led to significant delays in delivery on the sites, however, following contact with the relevant parties, it is apparent that the three sites approved are currently working towards reserved matters. It is expected that the three sites will contribute approximately 2,758 dwellings in total.

The South Derbyshire Local Plan was adopted in May 1998 and includes three major housing allocations: the former Hilton MOD Depot; Church Gresley; and Stenson Fields. Originally allocated for 1,100 dwellings, the site at Hilton has been completed in this monitoring year including a site south of Egginton Road, outside of the original allocation but still on the Depot site, for 98 dwellings. The allocation for 1,000 dwellings at Castleton Park, Church Gresley, was granted outline planning permission in 2000. The detailed applications for numerous phases now provide a site capacity of 1,270 dwellings of which 370 dwellings have yet to be completed. The bulk of the Stenson Fields allocation has been completed, however, capacity remains on the site for 98 in South Derbyshire.

There were 211 dwellings under construction and 5,130 dwellings not started as at 31 March 2011 on allocated sites or sites with planning permission. This includes approx 2,758 from the conjoined enquiry sites and 2,239 at Drakelow Power Station. Despite this provision of available housing sites it seems likely that, in the short-term at least, the continued global economic slow-down will restrict annual completions and this is reflected in the housing trajectory.

Rolling Five-Year Supply

At 1st October 2012 South Derbyshire had a housing land supply of 2.43 years supply in the PUA and 5.99 years supply in the remainder of the District.

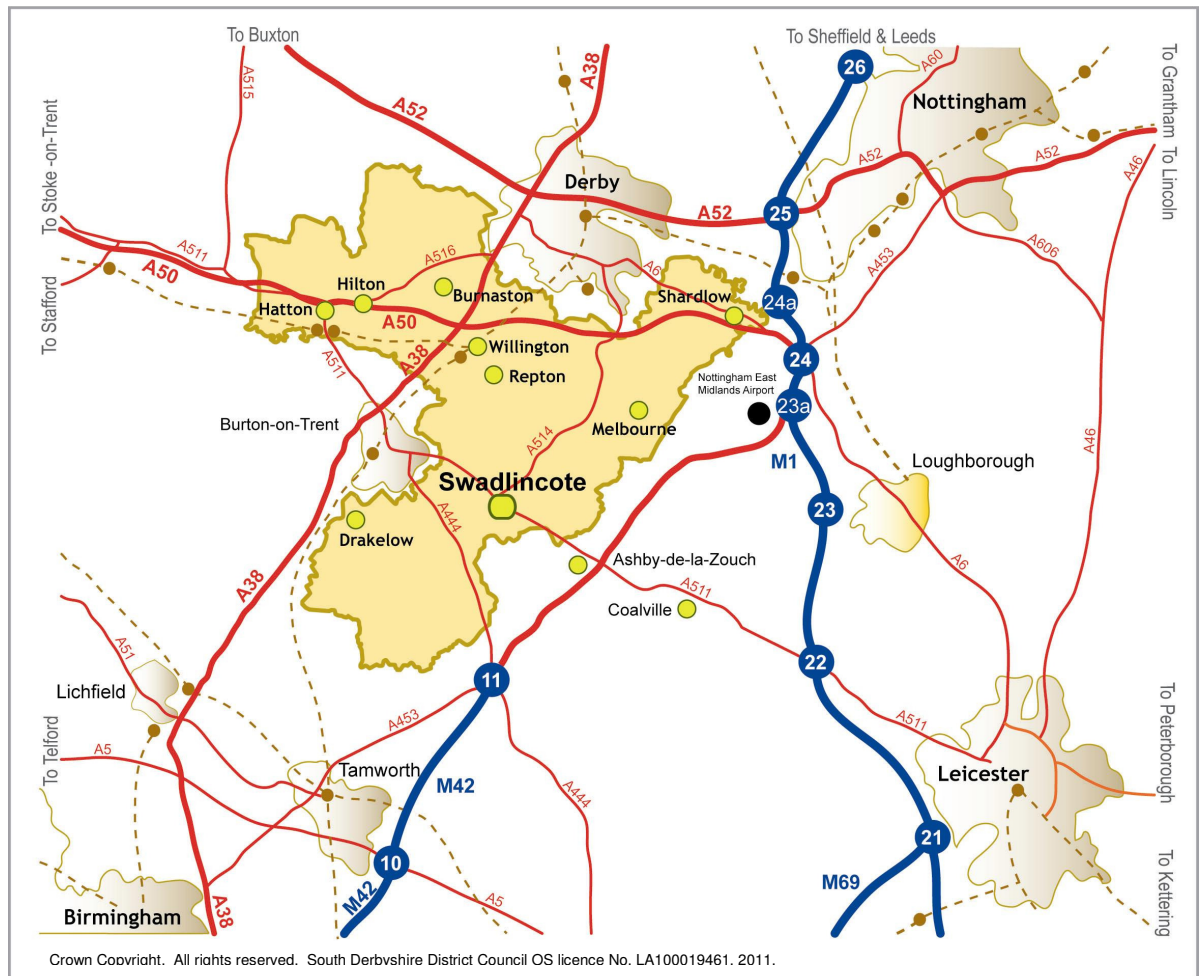

It is important to note that an additional substantial stock of planning permissions exist beyond the five year period, which is currently distorted by the wider economic conditions and as such is not exclusively a land supply issue.

PART 1 – INTRODUCTION

A PORTRAIT OF SOUTH DERBYSHIRE

- 1 The district of South Derbyshire covers an area of nearly 34,000 hectares (112 square miles) and is bounded by the City of Derby to the north, Burton on Trent to the west and Ashby-de-la-Zouch to the east. The urban area making up Swadlincote has a population of around 36,274 and is the largest settlement and commercial centre for the district, which had a total population of 94,600 at 2011.

Figure 1: Location Map of South Derbyshire District Council

- 2 For many years, the district has been the fastest growing in Derbyshire and is currently the 13th fastest growing District in England and Wales by population growth in percentage terms and 3rd fastest in respect of household growth¹. Official forecasts anticipate the population increasing to over 115,000 by 2031. This reflects the fact that the area offers a high quality of life and is a place people want to live.
- 3 The population is not just growing – it is also becoming older and more diverse. The number of people aged 65 or over is expected to account for 26.6% of the population by 2031 compared to just 19.9% in 2011. The ethnic minority population is relatively small, but this too is expected to grow in the future, particularly around the fringes of Derby.

¹ 2011 Census - Population and Household Estimates for England and Wales, March 2011. Available [here](#)

- 4 Alongside rapid housing growth has come the development of a variety of suburban housing developments across the district over the last twenty years or so. These tend to be popular and desirable places to live. However, in the future there will need to be considerable improvements to make sure that the new places we create are well connected and of the highest standards of environmental quality and design and contribute to tackling climate change. Reducing the need to travel and providing alternatives to car use is a key part of this. As a rural district, South Derbyshire residents rely more heavily on the car to travel to work than the county or national average.
- 5 The affordability of housing is also a significant issue and in 2011/12, average prices were 6.7 times the average earnings of working residents. There are varying predictions in terms of housing affordability and it is difficult to predict with any certainty the trend for the next few years. In the long term it is expected that, as capital becomes more readily available and confidence in the economy and housing market improves that house prices will rise again relative to incomes as the economy recovers from recession.
- 6 Despite strong population and housing growth, the district remains largely rural. Away from Swadlincote, the district is scattered with villages of varying sizes and roles. Considerable care has been taken to conserve the character of the villages and a number, such as Repton, Ticknall and Melbourne are of particular historic value. These are attractive places in which to live and are important for tourism, which accounted for around 2,210 full time equivalent jobs within South Derbyshire in 2011.
- 7 Several major watercourses cross the district including the Rivers Trent, Dove, Mease and Derwent and approximately one fifth of the land area is within areas at risk of flooding. South Derbyshire also contains numerous areas, which are important for wildlife including the River Mease itself - a site of international importance – and six nationally recognised Sites of Special Scientific Interest (SSSIs), together with many sites of local value.
- 8 Swadlincote, a market town, is the district's main settlement and the focus for commerce, leisure and learning. The area was for many years important for mining and pottery manufacture before dramatically declining in the latter part of the 20th Century. More recently, the town has undergone a period of significant positive change. Work has been completed which significantly improves the town's public realm. A Vision and Strategy, recently updated, has regenerated the town centre, whose potential has been further increased with the opening of 'The Pipeworks' retail development.
- 9 In the past decade, positive economic change has been driven by major inward investment throughout the district: on business parks at Dove Valley and Hilton in the north of the district and Tetron Point at Swadlincote. Further investments have also been made or are being planned by existing major businesses, a notable recent example being the granting of consent for major expansion of the Nestle coffee factory at Hatton. However, in overall terms, the pace of economic development has slowed in recent years reflecting the protracted national economic downturn. There continues to be some pressure to redevelop established industrial premises and sites for other uses – particularly housing.
- 10 In the rural areas, agriculture remains an important industry with over 75% of the total land area of South Derbyshire being devoted to active agricultural use.

- 11 The southern part of the district lies within the National Forest – one of the country's most ambitious environmental initiatives straddling parts of Leicestershire, Derbyshire and Staffordshire. Since 1994, over 8 million trees have been planted and the Forest is now over half way to its aim of one-third woodland cover.
- 12 Overall, many of the headline economic indicators such as unemployment and economic activity are positive. Similarly, two thirds of local authorities in England are ranked as being more deprived than South Derbyshire when measured against a range of indicators, residents enjoy significantly better health than the England average and crime rates are relatively low.
- 13 Nevertheless, the area faces persistent problems, which will continue to demand concerted action particularly in terms of physical regeneration, education, skills, health and transport.

WHY DOES SOUTH DERBYSHIRE NEED AN ANNUAL MONITORING REPORT?

- 14 The Localism Act has removed the statutory requirement for local planning authorities to produce an annual monitoring report for the Government, while retaining the overall duty to monitor through “authority reports”. Local authorities are therefore able to choose which targets and indicators to include in the report as long as they are in line with the relevant UK and EU legislation. Their primary purpose is to share the performance and achievements of the planning service with the local community.
- 15 The Authority Report should contain:
 - i. The title of the local Plan or supplementary planning documents specified in the Local Development Scheme
 - ii. In relation to each of those documents:
 - The timetable specified in the local planning authority's local development scheme for the document's preparation
 - The stage the document has reached and
 - If the document's preparation is behind the timetable mentioned in paragraph (i) the reasons for this and
 - iii. Where any local plan or supplementary document specified in the local authority's local development scheme has been adopted or approved within the period in respect of which the report is made, a statement of that fact and of the date of adoption or approval.
- 16 The Authority report should also identify policies that are specified in a local plan that are not being implemented and to include a statement on why the policy is not being implemented and what steps will be taken to ensure that the policy is implemented.
- 17 In relation to net additional housing (market and affordable) the Authority Report must specify the net number of additional for the monitoring period of the report according to the relevant housing policy and also the number of net additional since the adoption of the policy.

Changes to the Content and Format of Monitoring Reports

- 18 Previously the format of the AMR was based on 'Regional Spatial Strategy and Local Development Framework: Core Output Indicators' (Update 2/2008), however, the 'Letter to Chief Planning Officers: Preparation and Monitoring of Local Plans' which was published on 30 March 2011 revoked this guidance.

- 19 The Council has chosen, for the time being, to continue to report against the same Core Indicators so as to ensure that we have consistent datasets as we progress the LDF Core Strategy, meaning that this AMR will look similar in layout to previous AMRs. The indicators may be amended in the future if it becomes apparent that other indicators would be more relevant and helpful to the district.

The South Derbyshire AMR

- 20 The period for this Annual Monitoring Period is 1st April 2011 – 31st March 2012. It seeks to build on the information set out in previous AMRs. As such, this AMR focuses on the District Council's progress in preparing documents identified in the LDS, on reporting against the Council's performance against the revoked Core Output Indicators and in reporting on a wide range of local spatial planning indicators including trends in employment and residential completions and land availability within the District.
- 21 In addition to updating the information published in last year's AMR, the District Council has, in advance of adopting any LDDs, sought to monitor the performance of saved policies set out in the South Derbyshire Local Plan (Adopted 1998). This has involved devising indicators for relevant policies, as none were included in the Plan itself. The justification for undertaking this work is twofold:
- a. It allows the Council to identify which Local Plan policies continue to be used to inform development decisions within the District; and
 - b. it provides an evidence base on which the justification for retaining policies beyond September 2007 was made and will help the District Council identify key policy areas that should be taken forward into the LDF.
- 22 In addition to the development of Local Indicators a small number of Contextual Indicators have also been collected and presented within this AMR, these local and contextual indicators have been adjusted from those in earlier AMRs in order to provide the most relevant and useful information.
- 23 Taken together, the suite of Core, Local and Contextual indicators included within this report provide a spatial profile of the district as well as more specific information on the effectiveness of policies set out in the adopted Local Plan towards meeting key objectives and targets. Having developed this framework in previous reports, the District Council is now seeking to generate valuable time-series data across the whole range of indicators, which can be modified as appropriate as LDF documents come forward. Increasingly, the AMR is serving as a corporate resource and a common evidence base document is now maintained to inform monitoring on both the LDF and Sustainable Community Strategy. It can be viewed on the Council's [website](#).

PART 2: PROGRESS ON THE LOCAL DEVELOPMENT FRAMEWORK

The Local Development Scheme

- 24 The first LDS for South Derbyshire came into effect in April 2005. However, this was quickly superseded by a revised (second) LDS, which was brought into effect on the 18th July 2005.
- 25 The justification for the early review of the LDS stemmed from the withdrawal of the draft Revised South Derbyshire Local Plan. The events that led to the withdrawal of this plan, which were exceptional and unforeseeable, are set out in full the 2008/09 AMR.

- 26 As, under the provisions of the transitional arrangements of The 2004 Act, the Planning Authority could not recommence a Local Plan Review the Council prepared an updated (second) LDS to reflect the fact that the Council would be proceeding directly to the preparation of the LDF.
- 27 However, towards the close of the 2006-07 monitoring period it became clear that a number of milestones set out in the updated (second) LDS would not be met, largely as a result of ongoing work resulting from the withdrawal of the draft Local Plan. For this reason, and also to reflect key milestones in the emerging EMRP and reflect ministerial advice published in August 2006 reinforcing the importance of LDSs as definitive management documents from 1st April 2007, the Council brought into effect a third LDS in March 2007. This LDS remains current and sets out the revised timetable over which the Council will progress a LDF in accordance with The 2004 Act.
- 28 In June 2008, the SoS introduced new national planning policy advice through a revision of PPS12, which significantly changed the way that Core Strategies were required to be prepared. These changes required a refresh of the authorities' LDSs to reflect the new process and content required for Core Strategies. It was expected that a revised co-ordinated LDS would be agreed with GOEM early in 2009. However, GOEM advised that any such revisions should be delayed until the issue of revised Regulations (in April 2009).
- 29 The 08/09 AMR gave a commitment to revising the LDS in 2010, however, following the radical changes introduced to the local planning system following the election of the Coalition Government in May 2010, further revisions to the timetable were necessitated. The LDS will be reviewed during 2013 to reflect revised timescales.

Status of existing plans

- 30 The 2004 Act allows for policies contained in an adopted Local Plan to be saved for three years from commencement of The 2004 Act and for those currently under preparation to be saved for three years from their adoption.
- 31 Following the withdrawal of the draft Local Plan in 2005, The Adopted Local Plan was saved in its entirety until the 27th September 2007. Beyond this period, the District Council has obtained formal agreement from the Government to extend further the period that policies contained in the Adopted Plan are saved. The list of policies saved beyond September 27th 2007 can be viewed at Appendix 1. These policies will remain 'saved' until such time as they are replaced by LDF documents. Supplementary Planning Guidance (SPG) associated with the saved policies in the 1998 adopted Local Plan will also remain as a material consideration when determining planning applications until such time as the policy that it supports is replaced by a policy in the new Core Strategy or other DPD. A full list of SPG is available to view on the District Council's [website](#).
- 32 In March 2012 the Government published the National Planning Policy Framework. Whilst setting out a national approach, the framework is intended to devolve greater planning policy and decision making powers to the local level. It indicates that, for the purposes of decision making, the policies of the local plan should not be considered out of date as a consequence of being adopted before the publication of the Framework. However, the policies in the Framework are material considerations that must be taken into account in decision taking and plan making. Plans therefore need to be reviewed to as quickly as possible to take account of the Framework.

However, due weight should be given to relevant policies in existing plans according to their degree of consistency with the Framework.

- 33 From the date of publication decision takers should also give weight to relevant policies in emerging plans according to the stage of preparation of the emerging plan, the extent to which there are unresolved objections to relevant policies and the degree of consistency of relevant policies to the policies in the Framework.

PLAN PREPARATION WITHIN THE MONITORING PERIOD

- 34 Throughout the monitoring period, co-ordinated work on the LDF Core Strategy has continued amongst the local planning authorities comprising the Derby HMA (i.e. Amber Valley Borough Council, Derby City Council, Derbyshire County Council and South Derbyshire District Council).
- 35 The focus of co-ordinated LDF work has thus far been collating a robust evidence base for the respective Core Strategies as indicated in Figure 2. However, public involvement in Core Strategy matters continued with the consultation on 'Your Neighbourhood: talk to us' which ran from February – May 2011. This was followed by 'Options for Housing Growth' from July – September 2011 and, most recently, the "Preferred Growth Strategy" from October – December 2012.

Statement of Community Involvement

- 36 The Statement of Community Involvement (SCI) was adopted on 3rd March 2006. There were therefore no milestones for the SCI within the AMR period.
- 37 A copy of the SCI for South Derbyshire District Council can be on our [website](#).

The Core Strategy

- 38 The Core Strategy programme has been aligned across the three local authorities comprising the Derby Housing Market Area (HMA). As indicated in last year's AMR, none of the milestones for preparation of Development Plan Documents have been met due to revised guidance issued by the Government.
- 39 To date, no formal revisions have been made to the timetable and the changes being introduced by the Coalition Government now mean a fresh look at the overall programme will, in any case, be necessary.
- 40 Over the monitoring year, however, progress continued on the Core Strategy. A period of public consultation was undertaken on the Preferred Growth Strategy between October and December 2012, which identified the preferred sites for strategic scale housing and employment development in the district over the period to 2028.
- 41 Work on the collation of a robust evidence base has also continued at both an HMA-wide and district level, as indicated in Figure 2 below.

The Woodville–Swadlincote AAP

- 42 As reported in last year's AMR, work on the Woodville-Swadlincote AAP was initially delayed due to complexities in preparing the evidence on which the preferred options would be based and this was followed by advice from GOEM, regarding procedural difficulties that had been encountered by other local planning authorities in the region who have sought to advance an AAP ahead of their Core Strategy as well as fundamental difficulties associated with 'soundness' encountered in other parts of the country.
- 43 As reported in previous AMRs, the Council remains committed to the regeneration of Woodville including the construction of a Woodville Regeneration Route. The strategic elements of this work are therefore being taken forward through the Core Strategy. To this end, some of the key options relating to the regeneration of this area were included in the Issues and Options consultation, which ran from January – May 2010.

Site Allocations and Generic Development Control Policies

- 44 It has been determined that the Local Plan should now be published in two parts. Part 1 will identify strategic growth sites for housing and employment and set out development management policies for the control of development in the district whilst Part 2 will identify smaller non-strategic development sites.

EVIDENCE GATHERING AND SURVEY WORK

- 45 The LDS indicates a range of survey work to underpin the LDF. The evidence base can be viewed on our [website](#) and this page will be updated as the evidence base emerges. The following table details completed and planned survey work as at March 2013 and will be incorporated into further revisions of the LDS:

FIGURE 2: EVIDENCE BASE COLLECTED (OR TO BE COLLECTED) TO INFORM THE LDF PROCESS	
Type Of Evidence	Date Collected (Or To Be Collected)
Assessment of the principal physical and environmental characteristics and needs of the local area	Topic Papers and Area Profiles, Published January 2010
Identification of the principal economic and social characteristics and needs of the local area at the local level	Through Sustainability Appraisal, Spatial Portrait and AMR Returns
Level 1 Strategic Flood Risk Assessment	Completed November 2008
Housing Market Area Wide Strategic Housing Market Assessment	Completed April 2009 (Work on update started 2012)
Housing Market Area Strategic Housing Land Availability Assessment	Completed February 2010 (Updated November 2012)
Housing Market Area Employment Land Study	Completed March 2008
Housing Market Area Employment Land Review Forecasts Update	Completed March 2013
Derbyshire Gypsy and Traveller Accommodation Needs Assessment	Completed May 2008 with review to be completed in 2013
Assessment of Retail Needs and Capacity for Swadlincote Town Centre	Completed December 2005
Assessment of potential transport impacts and mitigation	Ongoing
District Wide Biodiversity and Geodiversity resources	South Derbyshire Environmental Audit Completed 2007
Open Space Audit (PPG17 Assessment)	Completed September 2005
Consultation findings on community aspirations	Ongoing: Consultation findings to be reported as appropriate in line with the SCI.
Level 2 Strategic Flood Risk Assessment	To Be Confirmed
Review of conservation areas and additional conservation areas assessments/character appraisals	Ongoing
Housing Market Area Wide Cleaner Greener Energy Study	Completed November 2009
Identification of hazardous substances establishments and buffer zones	To Be Confirmed
Derbyshire Landscape Character Assessment	Completed 2004 (to be updated in 2013)
National Forest Landscape Character Assessment	Completed 2005
Housing Market Area Wide Water Cycle Assessment, Scoping and Outline Study	Completed October 2009
Sustainable Urban Extension and Strategic Sites Study	Completed October 2012

Draft Infrastructure Development Plan	Infrastructure subgroup of South Derbyshire Partnership established. Derbyshire Infrastructure Plan expected in 2013
Population and Household projections	Completed February 2011
Housing Requirements Study	Completed September 2012
Education Position Statement	Completed November 2012
Water Position Statement	Completed November 2012
Transport Position Statement (particularly refers to DUA modeling)	Completed November 2012

Assessment of Local Distinctiveness

- 46 The Better Design for South Derbyshire guidance document was approved at Committee in April 2010. This document requires developers to follow a logical design process in order to raise the design quality of new developments.

SUMMARY

- 47 Events following the election of the Coalition Government in May 2010 have had significant impacts on plan preparation. The National Planning Policy Framework gives local authorities and communities additional flexibility to look at the overall amount of development that can be planned for, and where that development can be located. The preferred sites for strategic housing and employment growth were identified in the Preferred Growth Strategy made available for consultation from October-December 2012.
- 48 Further to this, it is also apparent that neighbourhoods will have a bigger role to play in the new system with greater say through neighbourhood plans in due course. The 'Your neighbourhood: talk to us' consultation has given us a better understanding of some of the local issues and will allow us to include them within LDF documents.
- 49 In light of delays to implementation of the LDS following the radical changes introduced to the local planning system following the election of the Coalition Government in May 2010, the Local Development Scheme will be updated during the 2013 monitoring year to reflect a revised timetable.

PART 3: ASSESSMENT OF POLICY PERFORMANCE

OUTPUT INDICATORS

- 50 The following chapter sets out a range of indicators that the District Council has assembled in order to monitor the performance of the saved Local Plan policies with regard to delivering sustainable development.

TYPES OF INDICATOR

- 51 An indicator is a mechanism for measuring whether policies (in this case those included within the Saved Local Plan) are being implemented. Three types of output indicator have been included within this AMR:
- i. Revoked Core Output Indicators: These are indicators that the District Council collects. They were set out in '*Regional Spatial Strategy and Local Development Framework Core Output Indicators*' (update 2/2008), this guidance has since been revoked, however, the Council has chosen to continue collecting this data so as to maintain a consistent dataset.
 - ii. Local Indicators: Local Authorities are encouraged to establish local indicators to measure the progress of policies not covered by Core Indicators. As such, the use of local indicators provides the planning authority with the opportunity to measure policies, which seek to respond to the unique circumstances of the district.
 - iii. Contextual Indicators: These define the environmental, social and economic backdrop against which planning policies are being implemented. Contextual indicators should provide information on key changes that are taking place in an area (which in many cases will not be caused by the implementation of Adopted Local Plan Policies).

CHANGES TO THE CORE INDICATOR SET

- 52 The publication of '*Regional Spatial Strategy and Local Development Framework Core Output Indicators*' (update 2/2008) set out a list of Core indicators, which Local Planning Authorities previously had to record against. This has subsequently been revoked, however, the Council has chosen to continue collecting this data for the current monitoring period so as to maintain a consistent dataset.

FORMAT OF OUTPUT INDICATORS

- 53 The format of this year's AMR matches the format of the 2009/10 and 2010/11AMR, implementing the need to adopt a common reporting format. As such revoked Core Indicators are presented by topic consistent with the template guides provided in the revoked guidance (as discussed above). These templates are supplemented by additional commentaries where necessary.
- 54 A second tier of indicators (comprising local and contextual indicators) is then presented in a format similar to previous AMRs. This data is presented by topic heading and covers the following themes:

- i. Employment;
- ii. Housing;
- iii. Transport;
- iv. Local Services and Community Facilities;
- v. Recreation and Tourism;
- vi. Environment; and
- vii. Green Belt policies.

- 55 It should be noted, however, that whilst the District Council has drawn up local indicators many of the saved policies included in the 1998 Adopted South Derbyshire Local Plan do not have a specifically measurable component and may not necessarily relate well to the indicators. Nonetheless, the District Council recognises the importance of attempting to measure the performance of saved policies in order to inform future planning policy formulation and implementation. The local indicators have been updated since last year in order to ensure that they are as relevant and useful as possible.
- 56 In addition to detailed commentary included within this AMR, there is also additional employment background data set out in Appendix 2, and additional housing data set out at Appendices 3-6.

EMPLOYMENT CORE INDICATOR TABLES AND COMMENTARY

Business Development and Town Centres Table 1: Total Additional Floorspace, Proportion of Business Development on Previously Developed Land and Employment Land Remaining (by type)

	Description		B1a	B1b	B1c	B2	B8	Mixed	Total

Employment Land Availability at 31 March, 2012

57 A summary of the availability of new employment land since 1 April 2006 is set out in Table 1. A detailed breakdown of these figures is provided in Table 3.

TABLE 1. SUMMARY OF INDUSTRIAL LAND AVAILABILITY IN SOUTH DERBYSHIRE AT 31 MARCH, 2012

	Ha.
Completions since 1st April 2006	31.41
Under construction	6
Sites with planning permission	58.31
New land allocated in the adopted South Derbyshire Local Plan (1998)	5.47
EMPLOYMENT LAND SUPPLY	101.19

58 Between April 2006 and March 2012, the amount of new land developed for industrial and business purposes was 31.41 ha, with a further 6 ha that were under construction at the time of the 2012 survey. The average annual rate of development commencement and completion over this period is 5.23 ha.

Source: South Derbyshire District Council 2012

- 59 Within the District 63.78 ha, comprising outstanding planning permissions and allocations in the adopted Local Plan, can be identified as available for industrial and business development. Together with the 37.41 ha developed since 2006 or under construction, a total of 101.19 ha is allocated.
- 60 Of the 63.78 ha identified in Table 1 as being available as at 1 April 2012 (outstanding planning permissions and industrial allocations), 58.31 ha (91.42%) had the benefit of planning permission including those parts of estates that remain undeveloped but are covered by the original permission. The remainder of the Local Plan allocation to the South of Cadley Hill Industrial Estate, amounting to 5.47 ha of new land, upon which planning permission has not yet been granted, makes up the total. It should be noted that Hilton Business Park is not included on this list as it represents land with an established employment use.

Infrastructure Requirements on Major Sites

- 61 Table 2 shows the services that can be provided on each of the employment sites measuring 5ha. or more.

TABLE 2. INFRASTRUCTURE REQUIREMENTS ON MAJOR SITES

Location	Water	Electricity	Gas	Drainage	Telephone	Broadband	Highway Access
Tetron Point ⁽¹⁾	√	√	√	√	√	√	√
South of Cadley Hill Industrial Estate ⁽²⁾	√	X	√	√	√	√	√
Hilton Business Park ⁽³⁾	√	√	√	√	√	√	√
Dove Valley Business Park ⁽⁴⁾	√	X	√	X	√	X	√

Source: South Derbyshire District Council 2012

- (1) Site is understood not to be affected by infrastructure constraints
- (2) It is understood that there is no known power supply to this site. The western edge of the site has a foul sewer and rising main of 150mm. This will all need to be re-designed and a new pumping station developed.
- (3) Site is understood not to be affected by infrastructure constraints.
- (4) Site is understood not affected by infrastructure constraints other than drainage capacity, which is being addressed. It is understood that further development may require the provision of a new electricity substation as electricity demand in the area is nearing the limits of current capacity. Broadband in North West parishes slower than elsewhere in the district.

Conclusions

62 A high level of new development was completed in 2007, but activity since has fallen significantly, reflecting the national double dip recession. There are few known service constraints affecting the major allocated sites and the situation will be kept under review.

HOUSING CORE INDICATOR TABLES AND COMMENTARY

Commentary

- 63 For the avoidance of doubt this AMR reports on all indicators including those related to the EMRP, up to the formal end of the monitoring period (31st March 2012).
- 64 Residential land supply is monitored annually in South Derbyshire with full site surveys on or around 31 March each year, in accordance with a county-wide protocol. The use of a database linked to GIS enables planning permissions and progress on sites to be tracked on a consistent basis across Derbyshire. Information is also collected on the development of affordable housing by tenure as well as data on house sizes and development densities on wholly completed sites.
- 65 As with previous years, all completions have been categorised according to the dwelling type, the number of bedrooms, the dwelling tenure and the dwelling provider in the remainder of the housing section.
- 66 The EMRP set a target of 36,600 dwellings across the HMA 2006-2026 (1,830 dpa). Of these 36,600 dwellings, 21,400 dwellings are expected to be located within or adjoining the Derby PUA; South Derbyshire is required to provide a minimum of 320 dpa of its housing within or adjoining the PUA so as to contribute to this HMA requirement. Development in the remainder of the district (280 dpa) is to be located mainly at Swadlincote.
- 67 The housing trajectory at Appendix 6 details our progress against the EMRP. It can be seen that the supply reduces after 2017/18 and by 2022/23 there are only three sites delivering new housing in South Derbyshire.

Completion Rates 2006-2012

- 68 Net completion figures have been adopted from 1 April 2006. As at 31 March 2012, a total of 2,735 dwellings had been completed within South Derbyshire since April 2006. Appendix 3 sets out residential completions by Parish 2006-2012. The overall completion rate for the period 2006-2012 is below the annual build rate of 600 dpa as is required by the EMRP. It should be noted that in the last four years there has been great economic uncertainty and the decline in dwelling completions is symptomatic of wider issues and is not restricted to the local or even regional level. There are however a stock of permissions that exist and are anticipated to be on-stream from 2014 onwards as shown in the housing trajectory at Appendix 6.

Residential Land Availability and the Housing Trajectory

Local Plan Allocations

- 69 The South Derbyshire Local Plan was adopted in May 1998 and includes three major housing allocations: the former Hilton MOD Depot; Church Gresley; and Stenson Fields. The first of these was fully completed within this monitoring period. The Church Gresley allocation is under construction and at the end of this monitoring period was over 60% complete and is now anticipated with additional permissions since the

original permission that around 1,300 dwellings will be provided on the site. The bulk of the Stenson Fields allocation has been completed, however, capacity remains on the site for around 98 dwellings.

- 70 **Dwellings under construction:** The number of dwellings under construction (211 dwellings) has reduced since the last monitoring year; this is indicative of a reduced number of housing starts, especially on new sites, due to the ongoing economic uncertainty in the sector.
- 71 **Sites with Planning Permission:** Large sites with full or outline planning permission have remaining capacity for a total of 6,653 dwellings. However, the recent slow-down in the housing market will affect future delivery rates across the whole supply. It is expected that 5,228 of the dwellings with planning permission will contribute to housing land supply to 2026. The list of large sites is provided at Appendix 4 and there is also a District Summary for small sites at Appendix 5.
- 72 **Windfall estimates:** No allowance has been included.
- 73 **Losses:** An allowance for 10 dwellings losses per annum has been included in the trajectory. This figure is based on previous rates of losses.

Figure 7: Housing Land Supply as at 31 March 2012 against the EMRP

	Dwellings	
	Remainder of the District	Derby PUA
EMRP Requirement 2006-2026	5,600	6,400
Dwellings completed 2006-2012	2,727	8
Dwellings under construction	211	0
Other dwellings with planning permission expected to be built 2012-2026	2,367	2,763
Adopted Local Plan Allocations without planning permission (expected to be built by 2026)	0	98
Total Supply	2,578	2,861

Source: SDDC 2012 (The planning permission data has been updated to reflect the position at 1st October 2012)

- 74 The EMRP 'Housing Trajectory' graph below sets out the forecast housing supply in the District from 2006-2021. The projected completion columns show the number of dwellings with outstanding planning permission, with a judgement made as to when these dwellings will be completed.

- 75 The 'Manage' line of the trajectory shows how many dwellings needed to be built per year for the remainder of the Plan period in order to meet the strategic requirement. The detail behind these graphs is set out in the trajectory table at Appendix 6.
- 76 The trajectory graph below shows large sites (i.e. sites of 10 dwellings or greater) listed individually and small sites grouped together. The delivery of sites has been calculated firstly by using information from the developer, where this was available, secondly by looking at past performance and thirdly by making an allowance for the current housing market.

Figure 8: Housing Trajectory Against East Midlands Regional Plan 2006-2021

5-Year Land Supply Requirement

- 77 At 1st October 2012 South Derbyshire had a housing land supply of 5.99 years in the Non-Principal Urban Area (PUA) “Remainder of the District” and 2.43 years in the PUA according to paragraph 47 of the National Planning Policy Framework which requires Local Authorities to have a five year supply of deliverable housing sites with an additional 5% buffer moved forward from later in the plan period. It is important to

note that a substantial stock of planning permissions exist beyond this five year position, which is currently distorted by the wider economic conditions and is not a land supply issue.

Completions on Previously Developed (Brownfield) Land

78 Of the 397 dwellings (gross completions) that were completed within the District in 2011/12, 38% were on previously developed (brownfield) land. As can be seen from the graph below, completions on previously developed land have continued to fall within this monitoring period. This is due to a significant proportion of existing planning permissions for residential development involving greenfield land and the completion of major brownfield permissions such as at the former Hilton Depot. There is however an existing permission for 2,239 dwellings on the former power station at Drakelow. The National Planning Policy Framework encourages the use of brownfield sites but does not set a national target, so a local target should be set through the Core Strategy.

Figure 9: Housing completions on Brownfield and Greenfield land

Source: DCC Residential Land Availability Database

Residential Densities

79 The following chart indicates the density at which residential development has taken place over the past monitoring year. This monitoring year shows a change when compared to the last monitoring year as 91 dwellings at less than 30 dwellings per hectare and none were completed at greater than 50 dwellings per hectare.

80 There is not a set requirement within the NPPF regarding the density of housing sites and paragraph 47 states that Local Authorities should “set their own approach to housing density to reflect local circumstances”.

Figure 10: Density of new dwelling completions

Source: DCC Residential Land Availability Database.

Note: This graph relates to completions on wholly completed, large sites (or on large sites where a phase has been completed). Some large sites wholly completed this year will have unit completions recorded in previous years.

Decisions on Housing Applications

- 81 The following two graphs show the outcomes of decisions and the outcomes of any subsequent appeals involving proposals for housing development. From 2008/2009 to 2010/2011 the number of decisions made decreased year on year, however within this monitoring period there has been a slight increase of 5 in the number of decisions made. The total number of appeals has also increased from 2010/11 with 7 appeals but as in 2010/11 only 1 of these was allowed within this monitoring period.
- 82 The number of decisions in 2011/12 has shown a slight increase on 2010/11 however figures continue to show the continued average decrease from 2007/08. This is an indication of the ongoing difficult economic conditions in which this monitoring period has passed.

DECISIONS PER YEAR

APPEALS PER YEAR

Source: DCC Residential Land Availability Database

Dwelling Type Monitoring

83 Completions are recorded on a site basis. Figure 13 below shows the completions in 2011/12 categorised by type of dwelling, number of bedrooms and tenure. For example, it can be seen that out of all 2011/12 completions, 33 units were 'affordable'. This has decreased from 90

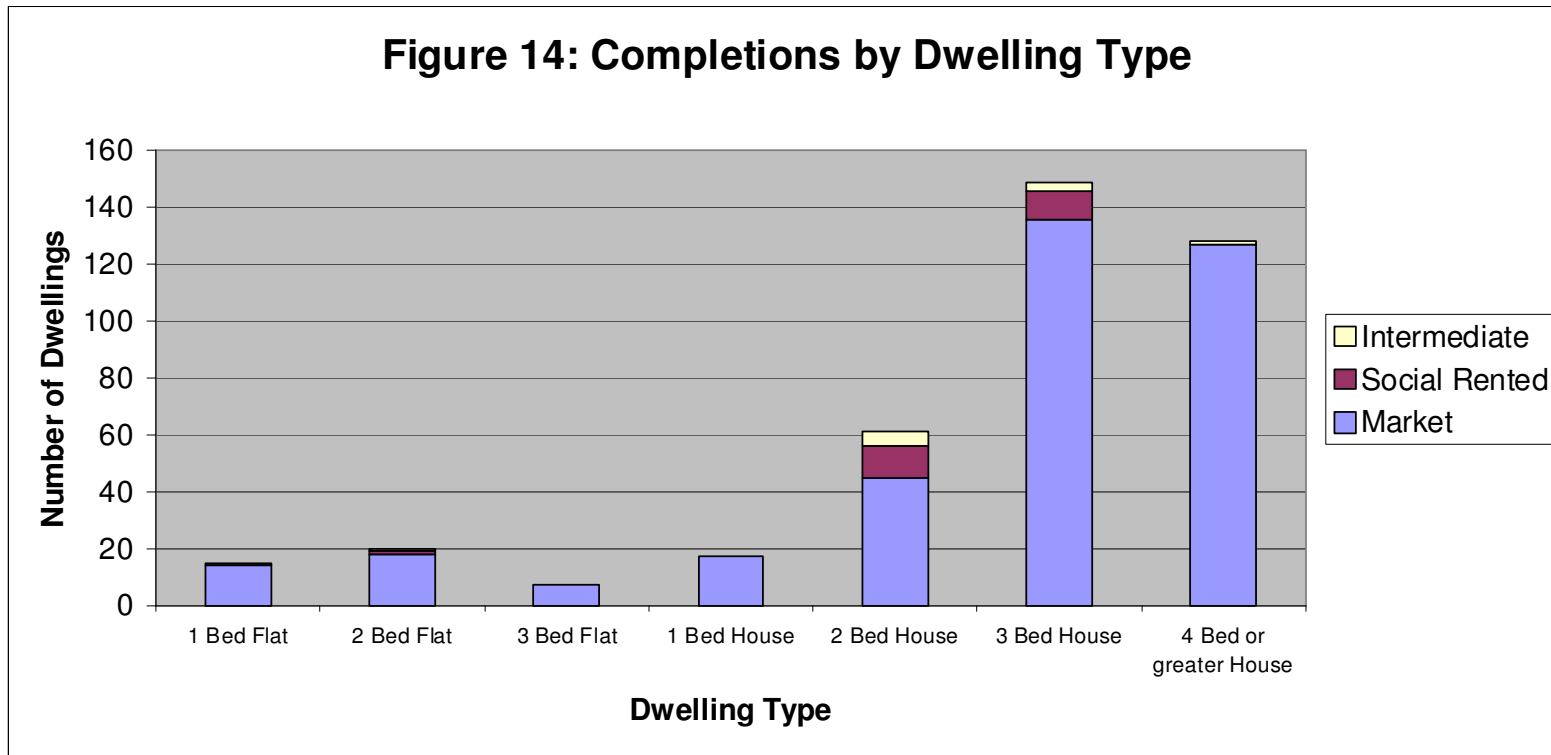

such competitions in the previous monitoring report. Of these 24 were social rented; this is a significant decrease from 67 units in the previous monitoring year.

- 84 There were fewer flats and apartments completed in comparison to last year, 42 in 2011/12 and 78 in 2010/11, whilst the number of houses/bungalows was broadly similar. In terms of the bedroom size for the houses and bungalows completed there was another increase in the number of 1 bed, 3 bed and 4 bed plus market houses/bungalows in comparison to the previous year.

Figure 13: Gross Completions in 2011/12 categorised by dwelling type, size and tenure

Dwelling	Bedrooms	Dwelling Tenure	Dwelling	Affordable?	Units

Totals					397

Figure 14: Completions by Dwelling Type

Affordable Housing

85 The number of affordable housing completions is monitored alongside general market housing completions and it continues to be the case that current provision is not meeting identified needs. However, it was stated in the 2006/07 AMR that it was anticipated that the number of affordable housing completions would increase in future years. 2005/06 saw 5 affordable housing completions, 2006/07 had 16 such completions, 2007/08 had 25 such completions, in 2008/09 the number of completions rose to 44, and 2009/10 saw this increase to 84 affordable dwellings. In 2010/11 this figure rose again to 90 dwellings. Unfortunately this trend did not carry through into this monitoring period as the number of affordable completions significantly decreased from 2010/11 to 33 dwellings. Figure 15 below shows the number and type of affordable houses that currently have planning permission but are yet to be built. As at 31 March 2012 there were 1,572 affordable homes with planning permission yet to be built. This provides the basis for the expectation that affordable housing completions will rise again in future years.

Figure 15: Outstanding Affordable Housing Permission as at 31 March 2011

AFFORDABLE HOMES				
Site Location(s)	S106	Non S106	Exception Sites	Site Total

Accommodation Needs of Gypsies and Travellers

86 County-wide Gypsy and Traveller Accommodation Needs Assessment (GTAA) was published in September 2008 and recommended that South Derbyshire be provisionally allocated a requirement of 19 new pitches over the period 2007-12. The GTAA made clear that provision had not been allocated to neighbouring districts because those areas do not have any public sites, and therefore, any waiting lists. A clear need was identified in those areas through the research, however, and the report recommended that some of the South Derbyshire requirement should be met in adjoining areas. This pitch requirement was carried forward into the EMRP (Policy 16) and has now been met and exceed, with 22 pitched provided since 2007.

87 Looking beyond 2012, the Derbyshire GTAA states that if the population of Gypsies and Travellers in Derbyshire continues to grow at around 3% per annum, then 15 new pitches will be required every 5 years to meet the needs of new households.

88 In March 2012 the Coalition Government published Planning Policy for traveller sites, which came into affect at the same time as the National Planning Policy Framework. This will be taken into consideration moving forward with South Derbyshire's Local Plan.

Figure 16: Gypsy and Traveller pitch provision since 2006 as at 31 March 2012

Application Reference	Address	No. of Pitches
9/2007/0804	Land at Park Road, Overseal	3

ENVIRONMENT TABLES AND COMMENTARY

Environment Table 1: Number of Planning Permissions Granted Contrary to Environment Agency advice on flooding and water quality grounds

	Flooding	Quality	Total
E1	13	4	17*

* Note; Information taken from the Environment Agency's register of objections for the period 01/04/2011 and 31/03/2012 for water quality and flood risk.

Environment Table 2: Change in Areas of Biodiversity Importance

	Loss	Addition	Total
E2	2	3*	+18.87ha

*Addition of 3 new Local Wildlife Sites, the reduction of 1 Local Wildlife Site boundary and the removal of 2 Local Wildlife Sites from the register. Giving a net gain in the overall number of sites of 1.

Environmental Quality – Renewable Energy Generation

E3	Wind (onshore)	Solar Photovoltaics	Hydro	Biomass						Total
				Landfill gas	Sewage Sludge Digestion	Municipal (and Industrial) Solid Waste Combustion	Co firing of biomass with fossil fuels	Animal Biomass	Plant Biomass	
Permitted installed capacity (MW)	0	4.60	0	2.45	0	0	0	0	0	7.05
Completed installed capacity (MW)	0	4.60	0	2.45	0	0	0	0	0	7.05

COMMENTARY

- 89 The Environment Agency initially objected to 4 planning applications on water quality grounds within the monitoring period. There were 13 objections received from the Environment Agency on flood risk grounds within the monitoring period. These figures are unchanged from the 2010-11 monitoring period. Full details of the planning applications to which the Environment Agency objected to within the reporting period is available to view on the Environment Agency website.
- 90 Indicator E2, which measures changes in biodiversity, indicates that the area of land safeguarded for environmental reasons has remained largely unchanged within South Derbyshire since the previous monitoring period. There has been an addition of one county wildlife site taking the total number 156. Cumulatively County Wildlife sites cover an area of 1677ha or 4.9% of the District. There has been no loss or additions to SSSIs or the Districts Special Area of Conservation within the monitoring period. Together these areas cover a further 0.5% of the Districts area.
- 91 In terms of current installed energy generating capacity within the District there are presently two landfill gas facilities in the District located in Newhall (near Swadlincote). In combination these two facilities have a generating capacity of 2.45MW. In addition a 4.6MW Solar PV scheme has been permitted and constructed at Toyota within the monitoring period. Further information on projects located in South Derbyshire can be viewed on the Restats website. It is worth noting that a large Combined Cycle Gas Turbine Installation was consented in October 2007 by the Secretary of State under Section 36 of the Electricity Act 1989 on the site of the former Drakelow Power Station which was closed in 2003. Once constructed this site will have a generating capacity of around 1220MW although an application to extend this site was submitted to the Department for Energy and Climate Change (“DECC”) in April 2009. If consented and built this will increase the capacity of this site to 2640MW. In addition a further application for a 2400MW Combined Cycle Gas Turbine proposed for the former Willington Power Station was consented by the Secretary of State for the Department of Energy and Climate Change (DECC) in March 2011. Further information on this proposal is available to view here.
